SKILLS

- Languages:** C, C++, Python, Javascript
- Libraries/Frameworks:** NumPy, Pandas, Scikit-learn, TensorFlow, Langchain, FastAPI, React.js, Node.js
- Tools/Platforms:** MLFlow, Streamlit, GitHub, Google Colab, Docker, MySQL
- Soft Skills:** Adaptability, Time Management, Resilience, Accountability, Experimentation Mindset

PROJECTS

Formula 1 Race Winner Predictor:	Apr' 2025
Description	
- Developed a scalable ML pipeline using FastF1 API, Python, and XGBoost to predict Formula 1 race winners, integrating telemetry data with feature engineering and hyperparameter tuning. - Integrated telemetry data from FastF1 API into a machine learning pipeline with feature engineering and hyperparameter tuning for race winner prediction. Technologies Used: Pandas, NumPy, Sklearn, XGBoost, RandomizedSearchCV, Matplotlib, FastF1 API Outcome: Achieved 92% accuracy and 0.91 F1-score with XGBoost on imbalanced data by integrating data ingestion, feature engineering, and hyperparameter tuning into a pipeline.	
Kidney Disease Prediction using Deep Learning:	Feb' 2025
Description	
- Built a kidney disease image classification system using 12,400+ images across 4 classes from a Kaggle dataset - Trained deep learning models including VGG16 and ResNet50 using transfer learning for medical image classification tasks. Technologies Used: Python, TensorFlow, Streamlit, NumPy, Seaborn, Matplotlib, MLFlow, Docker, FastAPI Outcome: ResNet50 achieved the highest accuracy (93%), showcasing effective use of transfer learning and preprocessing in medical image classification.	
AI-Powered Job Application Assistant:	Dec' 24
Description	
- Built an AI-powered tool that automates personalized cold email generation for job applications by extracting job listings from company URLs and tailoring emails based on job descriptions. - Integrated Groq API for Llama 3, LangChain, and Streamlit for efficient processing and user interaction with automated job listing extraction and email personalization. Technologies Used: Python, Groq API, LangChain, Streamlit, Vector Databases (ChromaDB), RAG Outcome: Automated and streamlined the cold email outreach process, reducing manual effort while increasing personalization and effectiveness.	

CERTIFICATES

Tesla stock price prediction using Facebook Prophet (Coursera)	Aug' 2025
IBM Certification – Machine Learning	Jul' 2024
Generative AI with Large Language Models (DeepLearning.ai)	Apr' 2024
100 Days of Code: The Complete Python Pro Bootcamp for 2023 by Dr. Angela Yu (Udemy)	Sep' 2023
Data Structures and Algorithms (DSA) Self-Paced Certificate (Udemy)	Apr' 2023

ACHIEVEMENTS

Hackerrank 5 Star Badge Python: For solving various questions in Python on Hackerrank.	Feb' 2025
Completed the Google Nibbler Adversarial Challenge: Submitted 30+ prompts that exposed model flaws, aiding AI safety.	Jan' 2025
Ranked among the top 10% of students on the Dean's List at the university: For good academic performance.	Jun' 2024

EDUCATION

Lovely Professional University <i>Bachelor of Technology - Computer Science and Engineering; CGPA: 8.67</i>	Punjab, India Since September 2022
Sri Chaitanya Junior College <i>Class 12th with Science; Percentage: 97.90%</i>	Hyderabad,Telangana Jun' 2020 - Jul' 2022
Sri Chaitanya Techno School <i>Matriculation; Percentage: 100.00%</i>	Hyderabad, Telangana Apr' 2019 - Mar' 2020
